

NSHM — Keyword & Campaign Analytics

Marketing Analytics | Tools: Google Ads, Excel, Power BI

Objective

Analyze keyword-level Google Ads performance across NSHM's MBA, Brand, BTech and Hotel Management campaigns to identify wasted spend and improve efficiency.

Business Problem

NSHM was running multiple Google Ads campaigns across different programs, but spend was not being reviewed at the keyword level - meaning underperforming keywords kept consuming budget unnoticed.

Dataset

Google Ads keyword performance data across MBA, Brand, BTech and Hotel Management campaigns, including spend, clicks, conversions and quality score.

Data Preparation

- Pulled and organized keyword-level performance data by campaign
- Flagged high-spend, low-conversion keywords for review
- Standardized keyword match-type and campaign labels for comparison

Analysis Performed

- Wasted-spend identification at the keyword level
- Campaign-wise performance comparison (MBA vs Brand vs BTech vs Hotel Management)
- Color-coded recommendation sheet highlighting keywords to pause, reduce or scale

Key KPIs

Spend · Wasted Spend · Conversions · CPL · Quality Score

Key Insights

- A small set of keywords accounted for a disproportionate share of wasted spend across campaigns.
- Some high-spend keywords had very low conversion rates and little relevance to the program being advertised.
- Brand and MBA campaigns performed noticeably differently from BTech and Hotel Management, warranting separate strategies.

Recommendations

- Pause or restructure the identified wasted-spend keywords.
- Reallocate saved budget to consistently converting keywords.
- Review keyword lists per program separately rather than applying one strategy across all campaigns.

Skills Demonstrated

Google Ads Analysis, Keyword Analysis, Excel Reporting, Campaign Optimization, Stakeholder Communication
